

PRODUCT OVERVIEW

NETWORKING

DMX MANAGEMENT MADE EASY!

Pathport frees you from having to compromise to accommodate a DMX network's limitations. Send data wherever you need it over a standard Ethernet network. Pathport provides the power of full channel patching for 128 universes, with built-in merging and prioritizing capabilities. Pathport nodes are available with one, two or four ports and are available in wall, portable or rack mount versions.

PATHPORT C-SERIES

Our most popular Pathport. Fitting into a 2-gang, deep masonry box, the C-series provides flush-mounting, with surface mount as an option.

2-input, 2-output or input/output are available – although any port can run in any direction with a turn-around adaptor. The LCD screen reports if DMX is active, and allows the end-user to 'soft-engage' labels, such as node location or purpose, using the configuration software.

Typically used wherever flush-mount is preferred, at both control and output locations, the discrete design will not seem out of place in any room.

PATHPORT R-SERIES

The R-series provides two ports in a rack-mountable form as well as some front panel functions. The end user can set

the universe number and control the backlight – or lock out these features entirely – without need of a laptop. Two Pathport R nodes will fit side-by-side within one RU of rack space making for compact installation. Rack ears are included.

Available in XLR5 or terminal block connectors, with a front connectors as an accessory. Truss mount also available.

PATHPORT D-SERIES

A surface-mount enclosure intended for retro-fits next to dimmer racks or for installation in utility closets and other controlled access locations. Ethernet and DMX wiring can be conduit-fed straight to the box and land on integral terminal blocks inside. Provides two ports of input, output, or one of each. Configurable with Pathport Manager software over the network.

PATHPORT UNO

An elegant, single-gang design provides one universe of DMX input or output, with all the soft patch features available in other styles. With unobtrusive LED indicators for DMX present and network activity, the Uno is ideal for use in public-accessible locations or where a low-cost, single port node is needed. Only operates on Power-over-Ethernet.

The Uno provides an output-side channel patch on a Net2 system – not available anywhere else!

Also available in a portable enclosure with hanging bracket, the Uno is available in a DIN-rail mountable form – the Pathport eDIN.

PATHPORT eDIN

Pathport eDIN is a single port DMX node designed specifically – but by no means exclusively! – for distributing control signal to LED installations. DMX is output via a terminal block or RJ45 connector, with the RJ45 user-selectable between the standard DMX-over-Cat5 pinout or a Color Kinetics wiring scheme. DIN-rail mountable for fast installation.

PATHPORT TOURING EDITION

Now take DMX Management on the road!

Pathport Touring Edition is a single port DMX node providing all of Pathway's renowned DMX-over-Ethernet management features in a rugged truss-mountable form. Designed specifically for the tour and rental markets, the Touring Edition is fully configurable

without need of a computer or a network connection.

DMX MANAGER PLUS

Pathway's DMX Manager PLUS! provides complete control of your DMX signal.

Merge, prioritize or re-map your sources. Each of the four ports can be set as an input or output. Combine two or three DMX sources into one output universe. Split one input into 3 outputs. Repatch the DMX between two inputs and two outputs using our unique channel mapping feature. Prioritize the input of different controllers – even automatically crossfade on loss of signal. And Ethernet support allows you to use the DMX Manager Plus as a 4-port input or output gateway on your Pathport network.

Selected Pathport nodes now also offer support for Artnet, ETC Net2, Strand ShowNet and sACN in addition to the Pathport Protocol.

One Less Thing To Worry About!
