

**PATHPORT**® — DMX MANAGEMENT SYSTEM

Pathport DMX Management frees you from having to compromise to accommodate a DMX network's limitations. Pathport provides the power of full channel patching through 64 universes, sending data wherever you need it, over a standard Ethernet network. Pathport also offers built-in merging and prioritizing capabilities.

**LDI 2000**  
**Product of The Year!**  
Lighting Software and Tools

**THE PATHPORT**® **ALLIANCE**

The Pathport Protocol is supported by an Alliance of major industry manufacturers who have committed to implementing the Pathport Protocol in their lighting control products. This alliance extends the power and flexibility of Pathport to a variety of respected lighting control platforms. Users are able to connect these controls directly to a Pathport network.

*"Our participation in the Pathport Alliance further brings an important addition to our Ethernet networking solutions. We are very excited about the possibilities it presents."*

David Cavalli, Director of Product Management  
Leviton Lighting Controls Division

*"All of us at Interactive Technologies are excited about the interesting new products that can be based on DMX-over-Ethernet and ACN technologies. Our technology partnership with Pathway Connectivity in the development of Pathport compatible products allows us to deliver new state-of-the-art lighting control network products."*

Rob Johnston, President  
Interactive Technologies, Inc.
